

Introduction of ECHO Revolve R4 :

Revolve is the world's first and only hybrid microscope, combining four microscopes into one. Transmitted light and fluorescence are both available. You can easily transform it between upright and inverted configurations. We've replaced the eyepieces with an iPad Pro to create an experience you've never seen before. With modern touch interface, you'll find Revolve is incredibly easy to use. No longer are years of training and experience required to drive your microscope. The Revolve eliminates learning curve and variability, allowing you to view and capture publication quality images.
